

留言板页面在菜单上

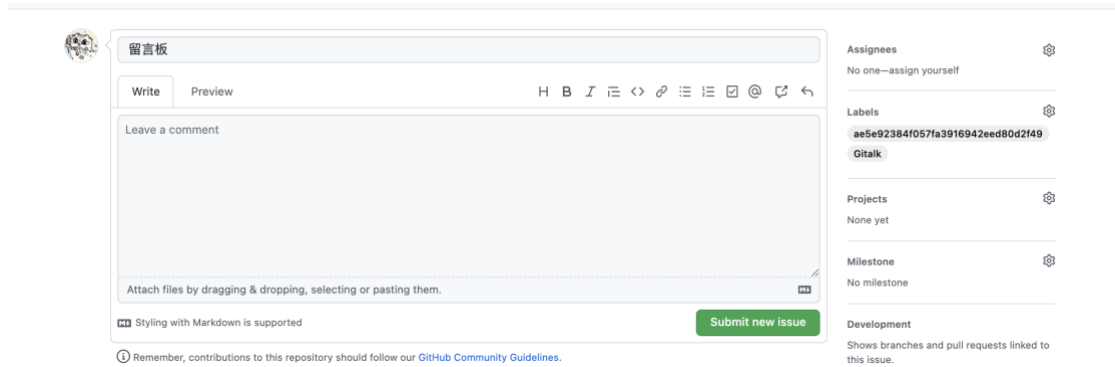

首先是未登录的情况，能正常显示评论插件。

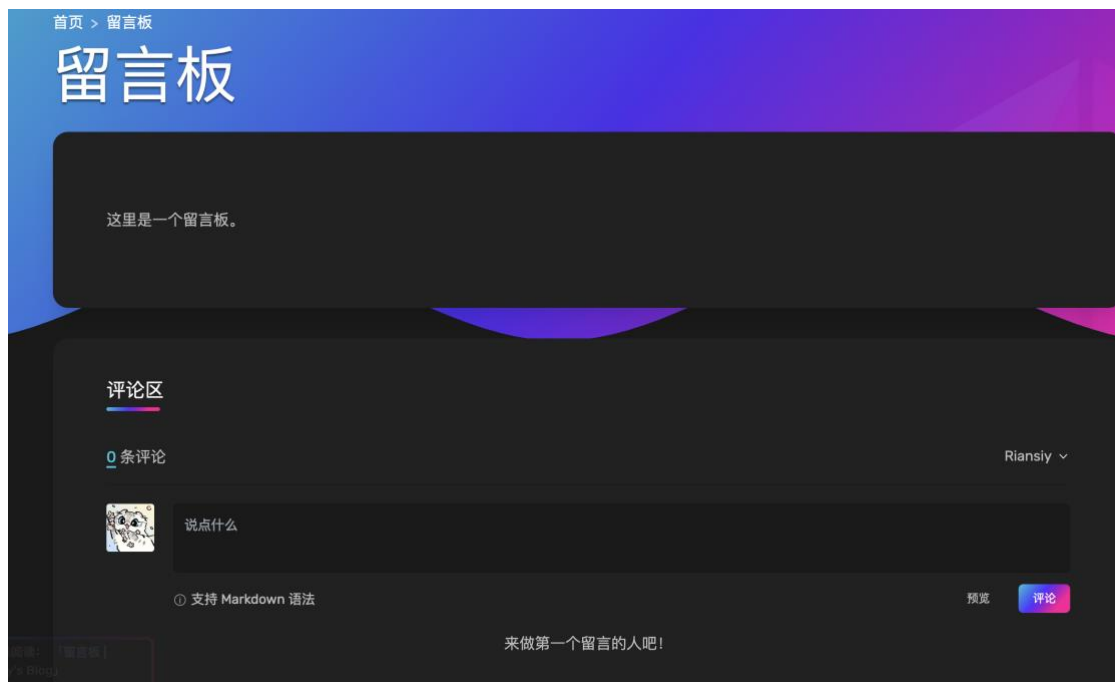

登录后显示 Error: Validation Failed. 查询其他资料后貌似是跟未获取到 uid 或其他有关。

```
! _config.aurora.yml  {} index.json ×  index.md
public > api > pages > message-board > {} index.json > uid
1  {"title":"message-board","uid":"ae5e92384f057fa3916942eed80d2f49","text":"这里是一个留言板。","da
```

在项目中找到了这个页面的 uid

在 GitHub 中手动创建（尝试

回到页面，显示正常

# 留言板

这里是一个留言板。

评论正常。

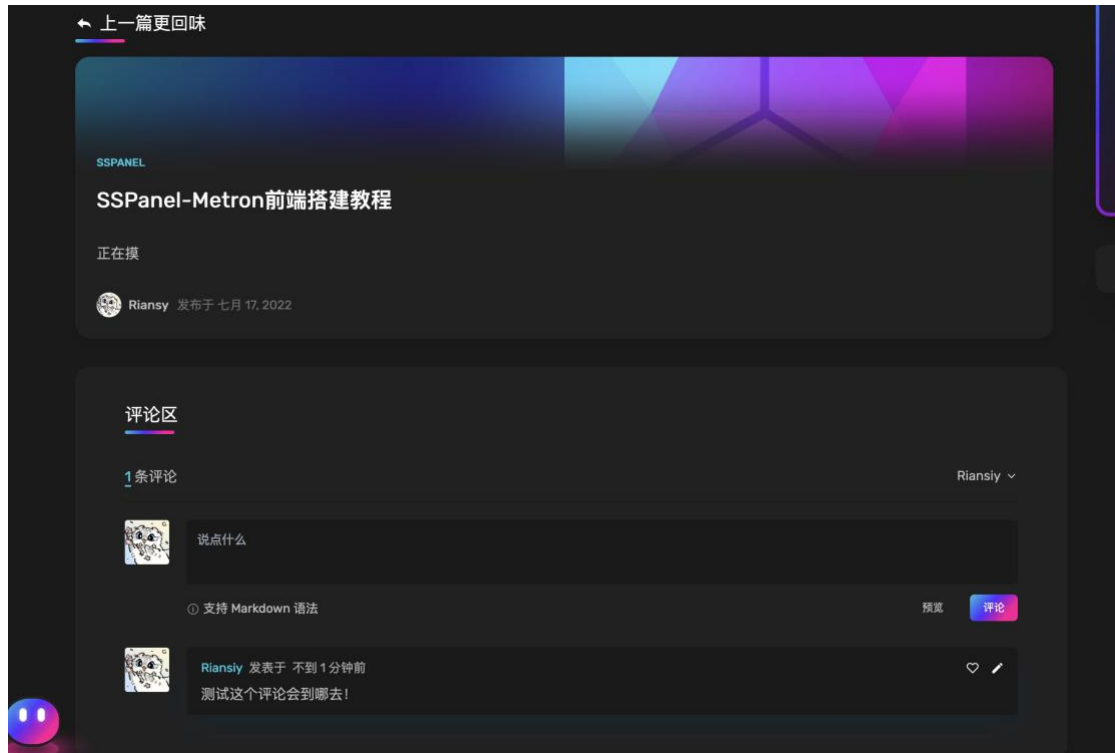

进入一篇文章，评论区初始化正常。

回到留言板，评论没了。

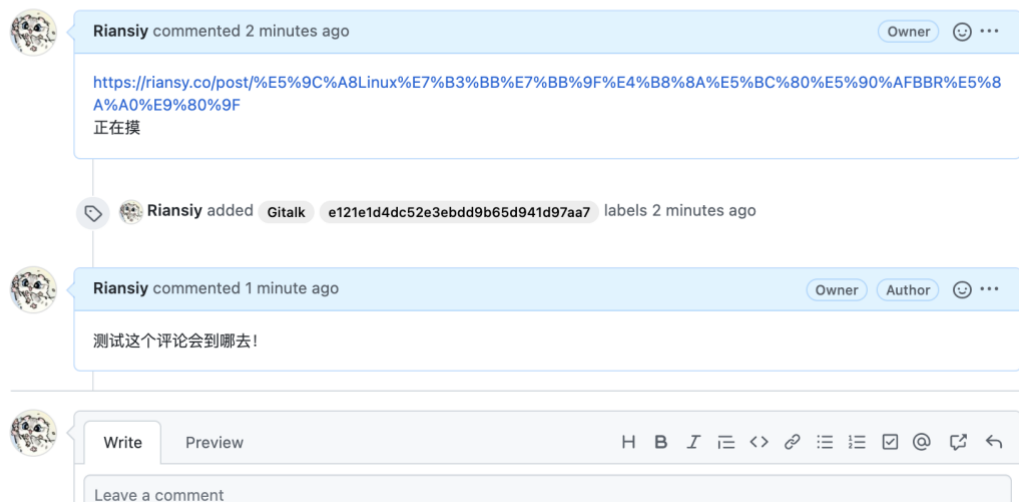

还能是可以评论的。

## 在Linux系统上开启BBR加速 #2
